DESCRIPTORS: *Histological techniques, *Tumors,
 Tissue cultures, Embryonated egg technique, Tissues
 (Biology), Cells (Biology), *Transplantation, Growth.

In order to study the antitumoral action of different sub-
 stances on the development of tumors transplanted into
 the egg during incubation, it is necessary to use a
 method giving a high percentage of positive transplanta-
 tions. Homogenization of the tumor tissue with Potter's
 apparatus considerably facilitates transplantation and
 simultaneously increases the percentage of takes.
